DETAILED ACTION

Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in response to this action, to elect a single invention to which the claims must be restricted.

- I. Claims 1-12, drawn to an expression vector, a host cell, a recombinant iclL-1ra-II, a method for producing iclL-1ra-II, and a pharmaceutical composition comprising iclL-1ra-II.
 - II. Claim 13, drawn to a method for reducing the amount of IL-1 in a patient having a condition associated with overexpression of IL-1, comprising administering the pharmaceutical composition comprising the glycosylated iclL-1ra-II.
 - III. Claims 14 and 15, drawn to a method for reducing the amount of IL-1 at a desired site in a human patient, comprising introducing an expression vector into appropriate endogenous human cells at the desired site to produce transformed cells which will express iclL-1ra-II.
2. The inventions listed as Groups I-III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

The technical feature linking Groups I-III appears to be the intracellular IL-1 receptor antagonist and the nucleic acid encoding the receptor antagonist. However, the prior art teaches cloning and characterization of an intracellular form of the human interleukin-1 receptor antagonist (See, e.g., Haskill et al, Proc. Natl. Acad. Sci. USA, 88:3681-3685, 1991; Muzio et al, J. Experimental Medicine, JP, Tokyo, 182:623-628, 1995). Therefore, the technical feature linking the inventions of Groups I-III does not constitute a special technical feature as defined by PCT Rule 13.2, as it does not define a contribution over the prior art.

3. The special technical feature in Groups I-III is a glycosylated icIL-1ra-II and a method for producing a recombinant icIL-1ra-II (Group I), a method for reducing the amount of IL-1 in a patient having a condition associated with overexpression of IL-1 comprising administering the composition comprising icIL-1ra-II (Group II), and a method of gene therapy to reduce the amount of IL-1 at a desired site in a human patient comprising introducing an expression vector into appropriate endogenous human cells (Group III).
4. Accordingly, Groups I-III are not so linked by the same or a corresponding special technical feature as to form a single general inventive concept. Thus, unity of invention is lacking and restriction is appropriate.
